TRANSPARANCY'S BENEFITS

- 1 — TransParancy™ guarantees a completely clear, clean-lined glass balustrade that provides an excellent contrast with other stair materials.
- 2 — TransParancy™ balustrades meet or exceed safety standards for structural analysis, and impact and soft pendulum testing.
- 3 — TransParancy™ balustrades can be tailor-made, using glass panels from standard sizes to extra-large.
- 4 — EeStairs controls the quality of TransParancy™ glass balustrades, from factory assembly to on site installation.

TRANSPARANCY 01

The structural safety glass is mounted on a steel or aluminium track embedded below the floor.

TRANSPARANCY 02

Stainless steel mechanical fixings are used to anchor 1-02 structural glass balustrade panels to the corresponding floor edge or staircase.

TRANSPARANCY 03

The system is characterised by floor fixed balusters carrying glass infill and handrail.

TRANSPARANCY BY EESTAIRS

TransParancy™ structural glass balustrades give stairs a really streamlined look because they're pure glass, without visible fixings or supports, and can be used for straight or curved stairs, landings and balconies. The toughened glass is securely mounted and meets regulations and quality standards in Europe, Asia, and the US.

TransParancy™ balustrades sit in concealed steel or aluminium tracks and their pure lines recall the way glass was used so elegantly in classic modern architecture. TransParancy™ maximises light and visibility in spaces.
